

D500 DEPALLETISER ROBOT

*PHOTO NOT CONTRACTUAL

The depalletiser of eggs pallets (stacks of 6 trays of 30 eggs) is a robotised set which enables automatic feeding of egg graders or breakers up to a capacity of 500 cases/hour (180,000 eggs/hour).

This robotised set fully and automatically assures all functions required:

- ◆ *Takes the full pallet*
- ◆ *Takes and places stacks of eggs 4x4*
- ◆ *Takes, evacuates and stores empty pallets and dividers*

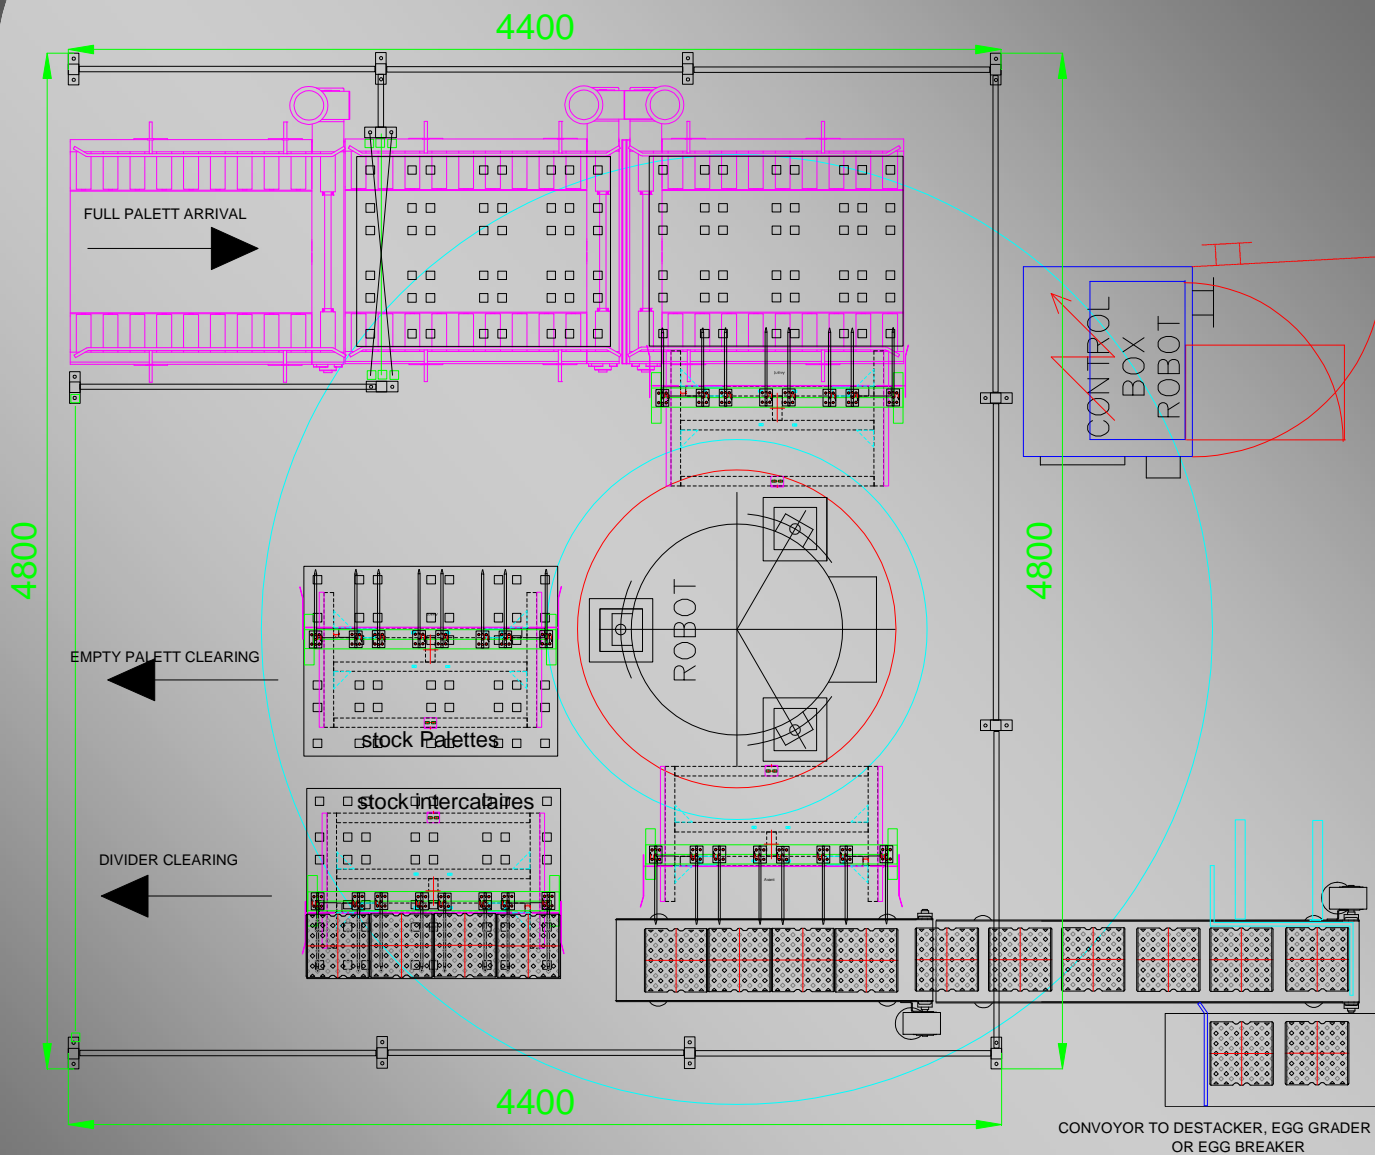

The system works with plastic trays and plastic or carton dividers. A cover removal system can be added if you are working with carton dividers.

Depending on the type of unstacker/loader used, a sequencing conveyor can be added to insert the stacks at fixed positions.

This robotised set is characterised by a grabber, specially researched programming to undertake all tasks required, low dimensions, great flexibility of use and increased productivity.

NB: With a constant desire to improve our equipment, modifications may be made
