

## SC280 SHELL CENTRIFUGE

The SC 280 centrifuge has a capacity of around 216,000 shells/hour. It guarantees reliability and is long lasting over time, thus solving maintenance problems.

The wholly reinforced structure resists any sort of stress. The transmission shafts and the belts have been designed to ensure lasting operation thus eliminating wear, offering continuous service and reducing maintenance over time.

This centrifuge does not use bronze rings. It is fitted fully on bearings which are equipped with an automatic greasing system, guaranteed to be longer lasting. It is built entirely in stainless steel to ensure hygiene, and is easy to dismantle for daily washing.
