

## **FV 12K ONE, TWO AND THREE PASSAGE SELF-CLEANING FILTER**

**COOLER**

**3 PASSAGES FILTER**

### **DESCRIPTION TECHNIQUE**

#### **TECHNICAL DESCRIPTION**

**Constructed in stainless steel.**

**On the same structure you can assemble up to three filtering units, each of a capacity of 12,000 litres and fully independent of each other.**

**This eliminates the need for manual cleaning work because the filter cleans itself automatically at pre-set intervals during the production cycle. If it is connected directly to the CIP plant lines, there is no need to dismantle it at the end of the day because it will be washed and cleaned during the CIP stage.**
